Executive Summary

Unisys plays a prominent role in efforts to combat risk through the technology products and services it provides to the government and major industries in Germany. Unisys' commitment to public and financial safety and security are the reasons for survey research to monitor progress in these areas.

The Unisys Security Insights is a snapshot of the nation's sense of security, and it provides a statistical measure of consumer concerns to enable organizations make more informed security decisions. The research is conducted by leading market research company Lieberman Research Group.

For the 2015 survey, consumers in Germany were asked about their perceptions regarding

- Personal data security, ranked by industry
- Experiences concerning security of personal data

Threat to personal data security is high across some industry sectors in Germany. Depending on the type of organization, the expectation that a security breach is likely within the next 12 months ranges from 45 percent for airlines to 78 percent for telecommunications providers.

With regards to experiences concerning security of personal data, a majority of Germans feel that criminals will always find a way to steal personal data (77 percent).

These findings serve as a reminder for organizations in Germany to review and deploy advanced security measures, to protect consumers from cyber as well as physical threats. A proactive outlook to security is at the heart of an organization's ability to effectively mitigate risk environment. The Unisys approach to security goes beyond bits and bytes, recognizing that the most effective solutions are going to be those formed through collaboration across interests. Unisys Outlook

High concern among Germans about personal data security in telecom companies and banks

The results of Unisys' Security Insights 2015 indicate that consumers in Germany are highly concerned about their personal data held by telecom companies and banks (78 and 63 percent respectively), while airlines are considered as least vulnerable (45 percent). The perceived vulnerability among Germans is high for telecom, most probably driven by a lack of trust among consumers owing to the recent instance of a highly publicized data breach in this sector.

The results indicate that consumers are increasingly concerned about lack of personal data security in organizations across all key industries. In such a scenario, organizations should aim to innovate and deploy advanced security solutions, to ward off sophisticated threats and regain consumer confidence.

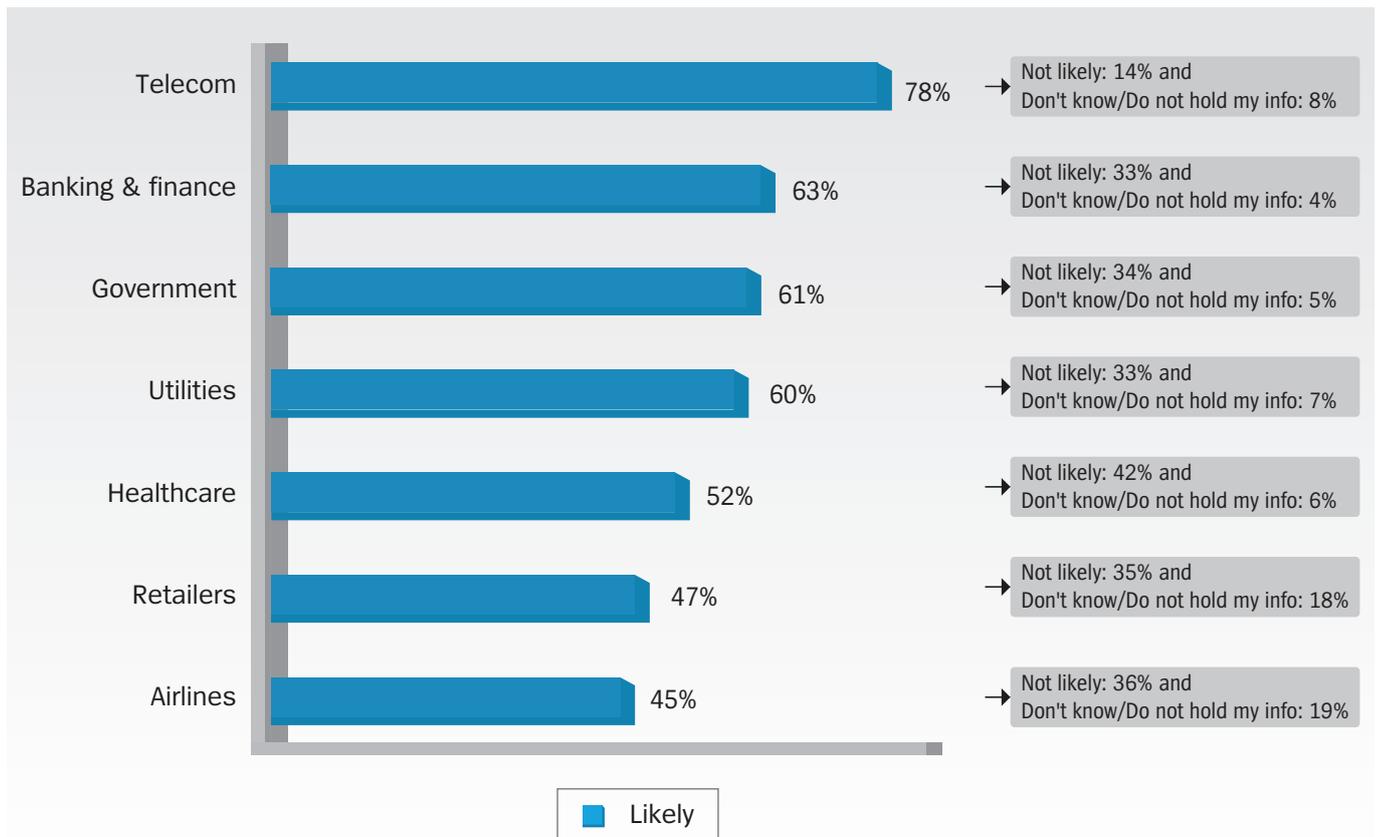

Data security threats are of serious concern among Germans

As part of the Unisys Security Insights, consumers were also asked about their experiences concerning the security of personal data. The research revealed that Germans take data security threats seriously, as a majority of consumers surveyed believe criminal theft of personal data as inevitable (77 percent). A good proportion of respondents also believe that organizations storing personal data should get certified by independent agencies like TUV, Dekra or ISO (45 percent).

A majority of Germans are inclined to take cyber security seriously, and organizations should focus on implementing tighter security controls to enhance consumers' safety perceptions.

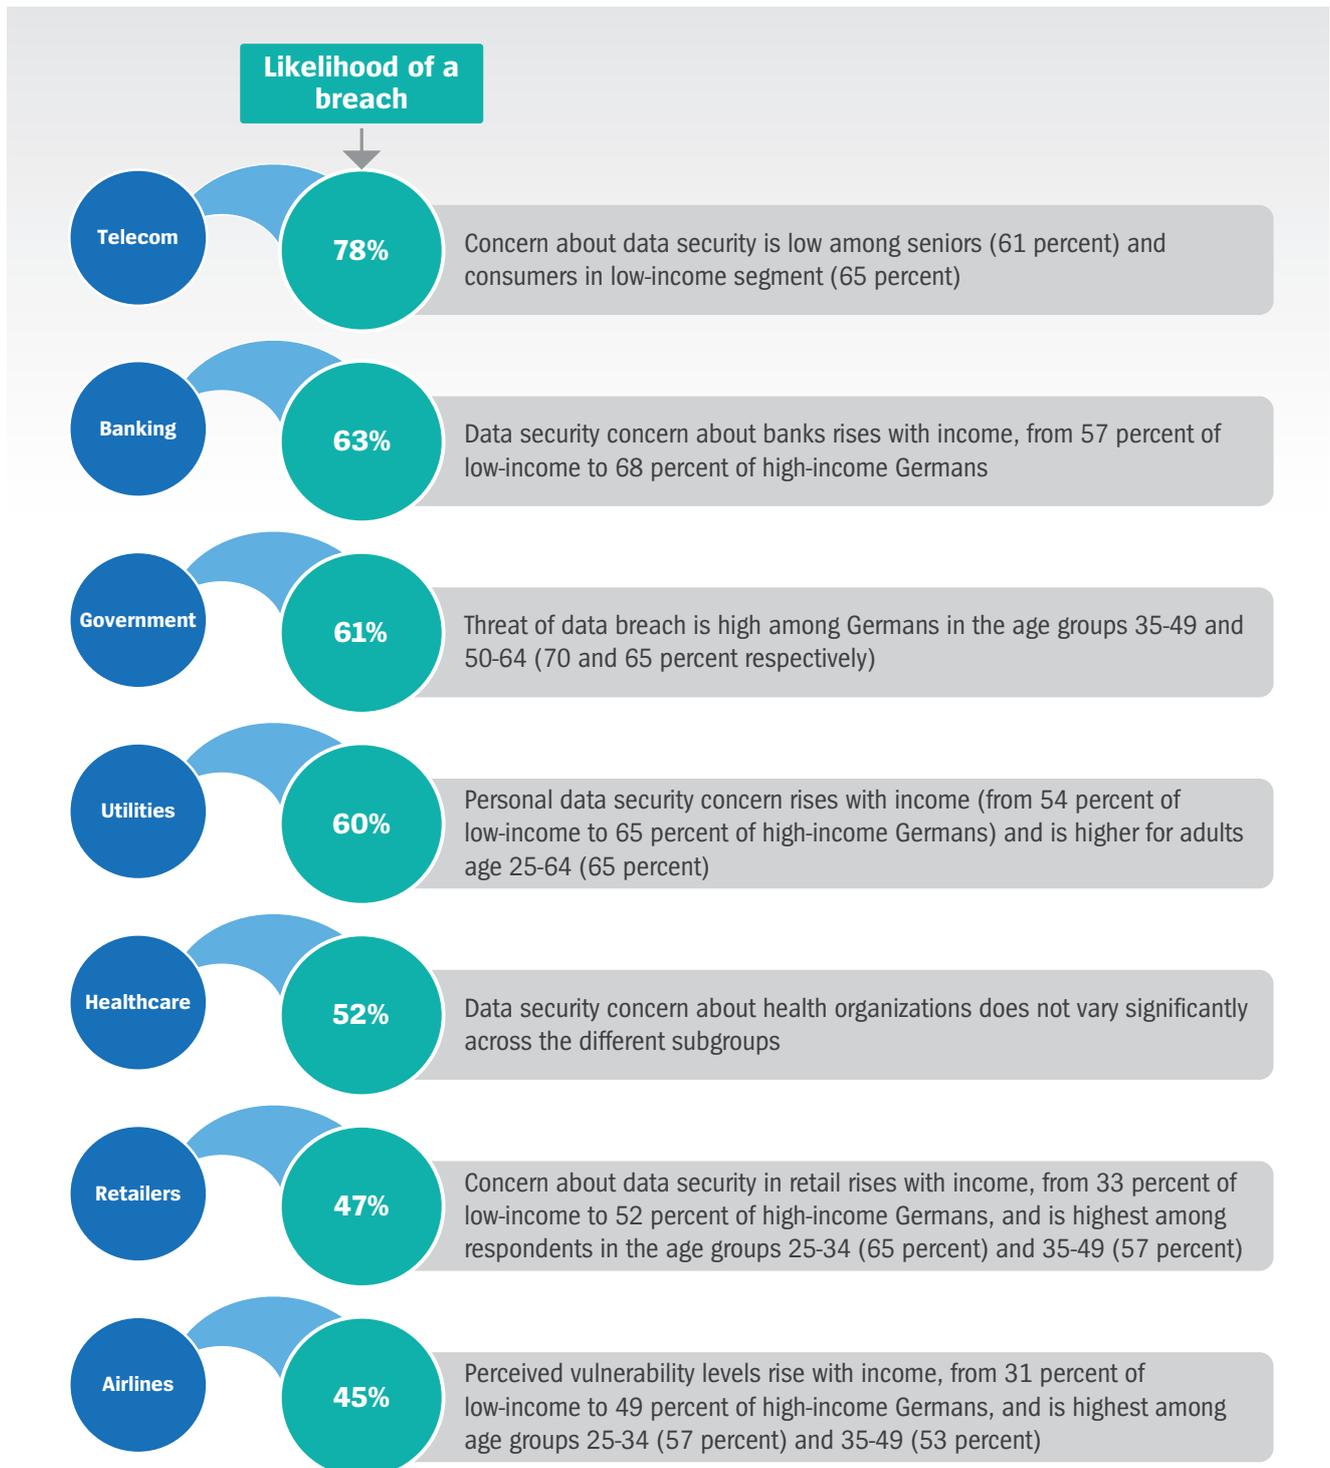

Detailed Findings: (1) For each of the following types of organizations that collect your personal information, how likely do you think it is that your personal information will be accessed by an unauthorized person either accidentally or deliberately within the next 12 months?

The perceived vulnerability in telecommunications companies is considerably high among Germans, as more than three quarters (78 percent) of respondents describe the chance of a telecom data breach in the next 12 months as “likely”.

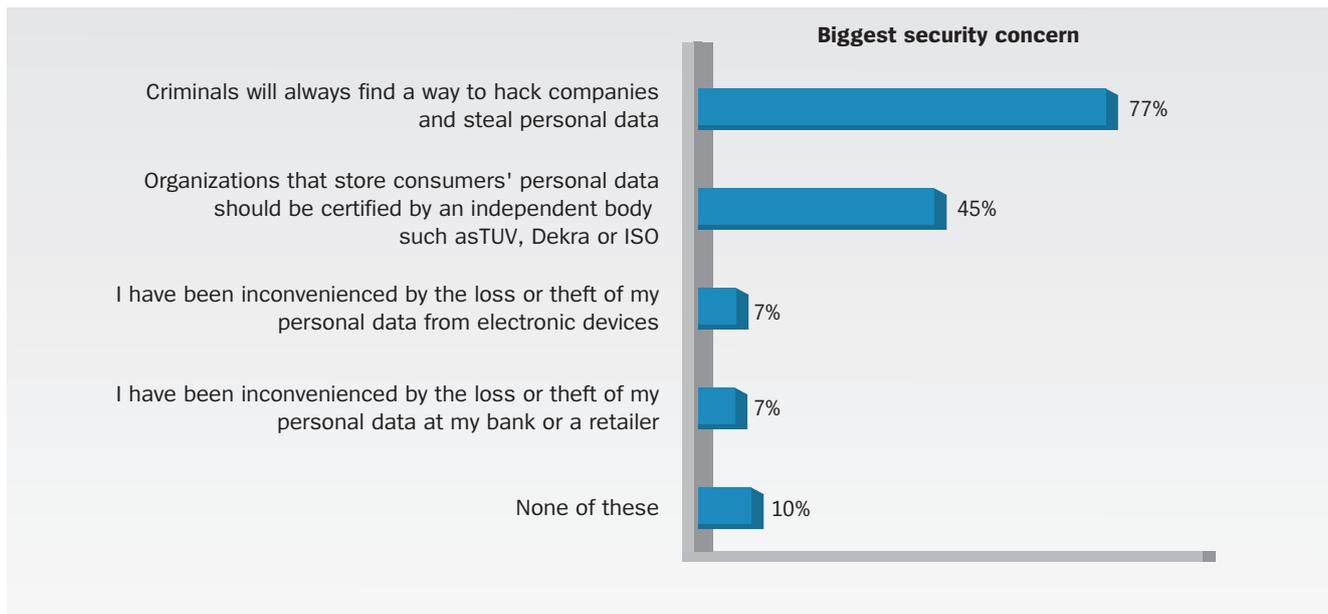

Key Demographic Differences by Industry

Consumer responses were analyzed based on demographic segments gender, age and income. Age categories are 18-34, 35-49, 50-64 and 65+ and income groups are segmented as high, medium and low.

Detailed Findings: (2) Which of the following statements describes your experience concerning the security of your personal data?

Germans take data security threats seriously. Three quarters (77 percent) believe criminal theft of personal data is inevitable, and almost half (45 percent) agree with the need to certify the data security protections of organizations that store consumers' personal data.

7 percent say they have experienced the loss or theft of personal data from electronic devices, and a similar proportion has experienced the theft of personal data from their bank or a retailer.

Key Demographic Differences

Hackers will inevitably steal personal data	Belief in the inevitability of data thefts drops with age, from 85 percent of Germans 18-34 to 65 percent of seniors, and is also low among low-income adults (66 percent)
Organizations storing personal data should be certified	Enthusiasm about certification rises with income, from 35 percent of low-income to 52 percent of high-income group
Personal data on electronic device was lost or stolen	Germans age 25-34 are most likely to have experienced theft of personal data from an electronic device (14 percent)
Personal data at bank or retailer was lost or stolen	Men (9 percent) and high-income Germans (12 percent) are more likely to have been victims of a bank / retailer data breach

Unisys Perspective on Security

The survey suggests that consumers are evidently concerned about their personal data held by organizations. Consumers confidence and trust were generally low for telecom companies, government agencies and banks, as these organizations have not succeeded in their confidence-building measures to win back trust. With an ever increasing hyper-connectivity of consumers across various digital platforms, the traditional mechanisms to protect sensitive personal data against advanced attacks are proving to be insufficient. For organizations to regain trust in the face of such an uncertain security environment, they should follow:

- Converged physical and logical security approach – As logical and physical security measures are converging, leading enterprises across the world should seek ways to solve critical challenges at the point of convergence. Such measures help integrate sensors, consolidate data, provide central or dispersed command and control, utilize the identity information and support real time as well as offline analytics. Converged security provides seamless monitoring from the Door to the Desk and to the Data.
- Biometrics for superior authentication – A robust security strategy incorporates multi-factor authentication methods that provide assurance. The authentication can be provided via various biometric techniques like face recognition, DNA matching, fingerprints, voice recognition and vein structure in hands.

Like Organizations, mobile devices too allow for advanced authentication techniques to prevent intrusions and information theft. The opportunity for organizations is to grow in tandem with consumer preferences while ensuring highest levels of protection.

- Isolation and compartmentalization for data protection – Protecting sensitive information from unauthorized access is the core objective for any security strategy. This typically involves two key activities of identifying the scope of data protection task, and isolating the people, processes and technologies that interact with the sensitive data. Data isolation is achieved by using access controls and encryption to ensure only authorized systems and users can access sensitive information. In addition, compartmentalization of user groups also result in minimizing the threat.
- Comprehensive Security Strategy – Maintaining superior security monitoring, awareness and reporting capabilities within a holistic cybersecurity framework helps protect data and networks from internal and external threats. An all-encompassing security strategy would encompass predictive, preventive, detective and retrospective capabilities.

Polling Methodology

The Unisys Security Insights research in Germany is based on telephone surveys carried out over April 24-28, 2015. The survey has been conducted as follows:

- 974 completed interviews among nationally representative adults, 18+.
- The survey was conducted in German
- The data from this survey are weighted to ensure projectability of the data to German adults.

Percentages are based on the full sample of 974. Subgroup differences are noted if they are statistically significant at a 95 percent level of confidence.

About Lieberman Research Group

Lieberman Research Group is a top-ranked and nationally recognized market research organization serving the business-to-business and consumer markets. Founded in 1966, it is now a \$30 million custom research company. Interviewing facilities in Manhattan and Brooklyn have the capability to conduct interviews in 20+ languages.

Lieberman Research is the only U.S. member of The Global Research Alliance – an international consortium of independent market research firms in over 20 countries that provides access to interviewing facilities internationally as well as local knowledge and input critical to successful international studies.

Through its research in the U.S. and worldwide, Lieberman Research provides custom research and information analysis to its clients on a wide range of issues including customer and employee satisfaction, loyalty, multicultural and ethnic marketing, new product development, public policy, advertising, public relations and many others.

Lieberman Research Group is a proud member of the Council of American Survey Research Organizations (CASRO). As one of over 150 CASRO member companies nationwide, we subscribe to the CASRO Code of Standards for Survey Research.

This code, intended to foster the highest standards of ethical conduct in the practice of survey research, protects our clients and helps ensure an environment in which the public, our source of information in most surveys, respects and cooperates with the opinion research process.

While non-members also may subscribe to the same high standards as CASRO members, membership in CASRO is an indication that our company takes seriously its obligation to conduct its business in accordance with the highest ethical standards.

About Unisys

Unisys is a global information technology company that solves organizations' most pressing IT and business challenges. With more than 20,000 employees serving clients around the world, our offerings include cloud and infrastructure services, application services, business process outsourcing services, and high-end server technology.

We deliver solutions for 10 of top 15 global banks, 15 of top 25 global airlines and more than 200 airlines worldwide. 10 million user incidents are handled in 26 different languages every year and 130 million health and human services transactions are processed each year by Unisys systems. Our processes are end-to-end ITIL v3 compliant and Global ISO 20000, 27001 and 9001 certified. Unisys holds over 1,500 U.S. and non-U.S. patents.

Unisys security offerings are trusted by government and commercial clients around the world to deliver advanced security to counter advanced threats. As logical and physical security threats converge, the world's most important enterprises seek a partner that can bring new ways to solve critical challenges at the point where they converge. Our award-winning, time-tested portfolio of professional services, products, and managed services delivers mission-critical security at scale, helping clients mitigate risk while reducing complexity and cost, and navigating regulatory compliance requirements.
